

Week 10

Intense breadboard progress.

Rigorous Testing with regards to our requirements and verification.

- We have just fully implemented the final schematic on our breadboard!
- It's been connected to the Arduino middleware layer and our system officially now works end-to-end.

3 sensors have been set up and put together

- Ph sensor (fully set up and tested between milk and water)
- Temperature sensor (fully set up and working with all readings of temperature)
- Light sensor (both in dark and bright settings)
